DETAILED ACTION

1. Claims 1-14 were pending in the instant application at the time of the issuance of the previous Office Action, mailed July 17, 2006. By the latest response from the applicant, claim 5 is now cancelled. Therefore claims 1-4 and 6-14 remain pending and have been examined.

Response to Arguments

2. Applicant's arguments with respect to claims 4, 5, and 14 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4, 7, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable Wasilewski et al. US 5,870,474, and Cordery et al., US 6,480,831.

As for Claim 4, Wasilewski teaches a method and means for carrying out the method for decrypting a message received over a broadcast network (abstract) comprising the steps of: receiving data comprising an encrypted message and a hashed

key at a node in said broadcast network (abstract) where said node comprises means for storing data (fig. 1 items 90a – 90n “Customers STU’s”); parsing said data to derive said encrypted message and said hashed key (col. 11 lines 24-30); comparing said received hashed key with a plurality of keys pre-stored in said means for storing data in said node and to select a key having a hash matching said received hashed key and decrypting said encrypted message with said matching key if a match is found (col. 11 lines 24-67). Wasilewski does not teach the step of requesting a key from a network entity if no prestored key is found to have a hash that matches said received hashed key. However, Cordery does teach this step where, upon a failed hash comparison, a new key is sent (fig. 3 elements S48, S50, col. 5 lines 1-38). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate this feature into the system of Wasilewski. It would have been obvious to do so since this would allow for a user to recover from a corrupted or compromised key as determined from the hash comparison step.

As for Claim 7, Wasilewski teaches a network entity that distributes hashed keys col. 4 lines 12-22 and col. 11 lines 24-30.

As for Claim 14, Wasilewski teaches parsing, comparing, and decrypting steps that are carried out at each of a plurality of nodes (col. 11 lines 24-67)

Allowable Subject Matter

5. Claims 1-3, 6, and 8-13 are allowed.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
